Franklinia, 7 cm. thick at base,
 5 cm. thick at top, 5 dm. high,
 branching at the summit, the

Branches divaricate - ascending,
narrowly oblong compressed, 4
dial. long of this 5-10 cm. wide,
1-1.5 cm. thick, light green.

Branchlets obliquely lanceolate,
obtuse, as wide as the branches,
but shorter, 1 cm. thick or less,
floriferous at and near the
apex; areoles of the oldest
branches pitted, about 1 cm.
apart, those of young shoots
slightly elevated; glochides
very short, yellow-brown. -

Spines of the trunk 15 cm. long
or less, very slender, gray, mostly
strongly reflexed, pungent,
those of the branches and branch-
lets restricted to the areoles
on their edges, shorter than those
of the trunk but similar,
those of the fruit yellow-gray,

2 cm long as lvs. -

Flowers coriaceous, even-keeled,
1 cm. wide; petals erect-
ascending, obovate, mucronulate,
about 4 mm. wide; anthers
half as long as the corolla;
style about as long as the
corolla; stigma yellowish-
greenish-crimson.

Fruit compressed-obovoid,
2 cm. long, 1.5 cm. thick,
bearing 1 or 2 spines at most
of the areoles -

Pepals fleshy, ovate, acute,
4 mm. long and wide
